

Dialogic® IMG 1010 Integrated Media Gateway is a carrier-ready VoIP gateway that supports both media and signaling in a single chassis. It allows service providers to add new telephony services quickly, and gives them a clear migration path to an all-IP network.

The IMG 1010 provides any-to-any voice network connectivity and can deliver SIP services into legacy SS7, PRI, and CAS networks, as well as IP-to-IP transcoding and multimedia border element functions, such as SIP mediation for network edge applications. Its compact 1U high-density design, integrated SS7 termination across multiple gateways, GUI-based management, and software licensing for in-service capacity expansion make the IMG 1010 an excellent option for VoIP.

The IMG 1010 also features the Dialogic® Programmable Protocol Language (PPL), which allows rapid implementation of SS7 ISUP variants and other signaling changes.

Features

Benefits

Simultaneous support for PRI, CAS, and SS7 signaling, along with SIP and H.323

Provides a flexible, cost-effective platform that can evolve from TDM-IP to all IP

SS7 signaling, call routing, call translation, and IP transcoding supported in a single chassis

Can reduce complexity and administrative overhead for VoIP services, and allows on-the-fly voice coder conversion

Supports multimedia border element capabilities, including SIP mediation, topology hiding, and media transcoding

Facilitates efficient operations between incompatible network elements in a service provider infrastructure.

Supports up to 1024 channels in a 1U chassis

Allows easy scalability from 96 to 1024 channels in a small footprint

Wireline and wireless support, including ENUM and DNS

Enables fast connection time and lower phone charges because callers can connect to each other directly without using the PSTN

NEBS 3 carrier-grade design uses independent network interfaces to separate transport, signaling, and OAM&P

Provides high reliability and service availability

Works with load balancers

Optimizes distribution of SIP traffic and improves scalability and fault tolerance

Technical Specifications

Routing Features

Call routing and translation based on ANI, DNIS, Generic Number (call routing only supported), and Nature of Address (NOA), Time of Day, Day of Week/Year

Algorithms include percentage-based routing and disposition by Cause Code

Pre- and post-routing digit translations with wildcard support

Multiple routing algorithms per trunk group or groups of trunks for IP-to-TDM and IP-to-IP, both A-law and μ -law conversions

Pre-call announcement (branding)

IP Bearer Features

Coder support: AMR, iLBC, G.711, G.723.1, G.729 A/B, G.729 E/G, GSM-FR, G.726, RFC 4040 clear channel

Echo cancellation: G.168 128ms tail length

Voice activity detection

Comfort noise generation

T.38 Real Time Fax

Fax/modem bypass

Digit transmission via RFC 2833 (SIP and H.323) or H.245 UII (H.323)

Symmetric NAT Traversal

Secure RTP media (for SIP)

OAM&P

Centralized Element Management System

GUI-based system allows monitoring and provisioning of up to 32 gateways

Node wizard for simplified configuration

Centralized routing engine simultaneously configures gateways in the network

Radius (billing, authentication, prepaid)

Local time zone support and Network Time Protocol (NTP)

SNMP

MIBs: MIB-2, Interface, Alarms, DS0, DS1, and DS3

Cacti reporting

Power Requirements

-48 VDC with voltage range (-40 V to -60 V)

120 - 240 VAC 50/60 Hz with voltage range (90 V to 240 V)

Power consumption: 90 W (can vary from 80 W to 100 W based on load)

Technical Specifications *(continued)*

Physical Specifications

Dimensions: 1.72 in. high (43.7 mm) x 17.25 in. wide (438.2 mm) x 19.00 in. deep (482.6 mm)

Weight: 18 lb (8.1 kg)

Resiliency

SS7 Signaling: 1+1 active/standby redundancy

DS3 N + 1 active/standby redundancy

Redundant Element Management System servers

IP Probing (Ethernet links)

Graceful software upgrade over multiple IMG 1010s

Graceful busy out per trunk group

Virtual IP addresses for SIP load balancing (via third party server)

Local termination of ISUP links and IP backhaul to IMG 1010 signaling node

Call Release due to media inactivity timeouts

Optional dual DC power

Capacity

96 - 768 TDM channels per 1U shelf (scalable from 3 E1/ 4 T1 to 24 E1 / 32 T1)

96 - 1024 VoIP channels per 1U shelf

I/O Interfaces

Telephony: T1 and E1, or DS3

IP: 4 - Fast Ethernet for control and signaling, 2 - Gigabit Ethernet for VoIP payload

T1/E1s for timing (BITS clock) and signaling

Loop timing via any telephony port

TDM Signaling Protocols

ISDN PRI (FAS and NFAS): NI2, Euro ISDN, DMS 250, 5ESS, JATE/Japan INS-NET1500

T1/E1 CAS (FGB, FGD and MFR2)

Q.699 ISDN to SS7 mapping

ISDN UUI mapping to SIP and H.323

SS7/C7 ISUP: ITU and ANSI variants supported through the Dialogic® Programmable Protocol Language (PPL)

SS7 TCAP for message-waiting-indication and Caller Name (CNAM) service

64 SS7 links in standalone configuration and 128 SS7 links in redundant configuration (A-links and F-Links supported)

E1 to DS3 mapping (for third-party STM-1 multiplexor compatibility)

ISDN call transfer and bridging via Explicit Call Transfer, Two B Channel Transfer, and Release Link Trunking (initiated via SIP REFER)

Delayed ANM for ISUP (triggered by third-party SIP call transfers)

Technical Specifications *(continued)*

IP Protocols

H.323

H.323 v2

H.323 Keep Alive
